

Reunion 11 Continued!

By Pamela Brigham

Features covered

- New search features
- New results menu
- Tree View features
- General New Features
- Maintenance Updates

New Find Features

- Search for marriage length
- Search for marriage day/month/year
- Search for all event dates, event places, event memo fields
- Search all note fields
- Search same sex marriages
- Search for people who appear in bold text – Shows in List window
- Search for people who appear with a child status – Shows in List window

New Find Features

- all of the search items in the Marriage submenu will search all families for each person, not just the family of the preferred spouse.
- split "Contact Info." into "Person Contact Info" and "Family Contact Info."
- added a "Any Contact Field" search condition.
- changed the "Any Field" item to "Any Person Field" and "Any Family Field."
- added new search conditions: "Field Starts With" and "Field Does Not Start With."
- renamed the "Starts With..." conditions to "Word Starts With" and "Word Does Not Start With."
- searching for a specific day, month, or year in any event field is much easier. These items now appear in the Find condition pop-up menu.

New Results Features

- New Results menu
 - Recent searches
 - Marked & unmarked people
 - Recent search results source usage
 - List of people in marked sets
- Search results can be updated, without revisiting the Find panel.
- When recalling a marked set, you'll have the option to unmark everybody in the family file before marking the people in the set.

New Features – Tree View

- In the pedigree tree view, right-pointing triangles will appear in the earliest generations when additional ancestors exist.
- In the pedigree tree view, command-clicking the Home button will start the tree with the wife of the current home family.
- Navigating in the pedigree tree view from a female ancestor to another ancestor and then clicking the Back button will return you to the female ancestor instead of her spouse.
- An expanded menu appears when control/right-clicking boxes in the tree view. Select spouses, children, siblings, or parents. Also find relatives, mark, mark everyone in the tree, show a person in the family view, or open the Edit Person panel for the clicked person.
- New shortcuts for zooming the tree view (Command +/-).

New Features

- Logs appear in a separate window
- Multimedia Metadata - for picture can be imported for picture comments
- A thumbnail picture appears in the **Edit Person** panel to visually remind you whose information is being entered/edited. The thumbnail can be clicked to show the Media window.
- Several new shortcuts, including: Option-click items in the list of sidebars (in the navbar) to open the List window, rather than the sidebar. And Control/right-click any field name in a source record to add or delete source fields.

New Features

- Privacy filtering options
- Cascading pedigree charts can include preferred pics
- Events list includes event memos
- Multimedia usage report includes duplicate files
- Mark direct line – marks everyone between two related people
- List window includes multiple spouses

Last Name	First & Mid Name	Spouse Name	Birth Date

SNYDER	Emma Delilah	George SHOOP	6 Jan 1895
SNYDER	George Washington		
SNYDER	Ida Alverda		
SNYDER	Johan Nicholas		

Maintenance Updates

- List of features:
<http://www.leisterpro.com/doc/version11/updates/updatedetails11.php>
- 11.0.2
 - Options to reduce family file size
 - Reunion>Preferences>Multimedia>Rebuild Thumbnails
 - Thumbnail details
 - File>Get Info
- 11.0.3
 - Revived the **Save Graphic** File menu item when working with charts
 - Changes to the font in **Preferences > General > Font** for lists and data entry no longer require closing the family file to take effect.

Maintenance Updates

- 11.0.4
 - Fixed a cosmetic issue (accidentally introduced in update 11.0.3) with the display of Note fields in the family view. Mainly this would cause some text to appear bold in the family view (Note field) when it actually wasn't bold
 - Fixed many issues with the Notes fields for coloring of text, and pasting, and finding & replacing text.
 - Added trackpad pinch and double-tap zoom support to the tree view and to charts.
 - Improved the responsiveness of click-drag panning in the tree view.
